Consider the following strategies to help families/children cope during COVID-19:

- Keep explanations brief, while using simple and honest language:
  1) If your child is asking questions repeatedly or his/her worries interfere with their daily activities, tell your child that there will be a certain time each day when they will have your undivided attention to discuss their worries and their fears.
  2) If your child comes to you and tells you they are anxious:
     - Inform them that you hear what they are telling you by acknowledging how they are feeling. Next, defer discussing your child’s worry until a predesignated time of day.
     - For example, you could say something like, “I can see you’re really worried right now. We will talk about that more at 6 o’clock.”
     - During that time, consider using child-friendly phrases like “strong germ” and “making people in the community sick.”

- Encourage your child to continue with their daily activities (as much as possible):
  1) Engage in typical morning routines, chores, meal times, and nighttime routines.
  2) Use visual timers or schedules to help children independently track their progress for the day.
  3) Maintain typical sleep schedules and screen time limitations.

- Promote positive child behavior by rewarding them for completing morning, afternoon, and/or all-day tasks:
  1) Children pick movie for family movie night.
  2) Family board game night.
  3) Children pick special lunch/dinner meal.
  4) Extra screen time.
  5) Special art activity.
Now is a great time to establish lifelong coping strategies to use for anxiety management:

1) Schedule 5-10 minutes to practice a new relaxation strategy with your child in a quiet and calm area of the house

   ➢ Deep Breathing
     - First, breathe in through nose, feel belly expand while chest remains flat. Then, breathe out through nose, feel belly contract
     - Tip: Try this one lying on your back with an object (e.g., phone, toy car) on your belly so you can see it expand and contract!
     - Check out this link [https://cmhc.utexas.edu/mindbodylab.html](https://cmhc.utexas.edu/mindbodylab.html) of guided videos for deep breathing

   ➢ Progressive Muscle Relaxation (PMR)
     - From head to toes: Think about each muscle, tighten it for 10 seconds, and then relax it

   ➢ Physical Exercise (e.g., walk outside)

   ➢ Guided Imagery
     - Think of somewhere calming (e.g., lake, beach) and/or happy
     - Then, have your child answer these questions: What does it look like? Who is there? What do you hear? What does it smell like? Are there any tastes?

Reassure children by promoting activities they can control during a time of uncertainty:

1) Praise children for washing their hands, not touching their faces, sneezing/coughing into their elbow, and helping clean the house

2) Model appropriate behavior by cleaning often and practicing social distancing
